DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Japanese patent Abstract 1076'. Note that the torch is moved to the cutting position h1 to ignite via pilot arc and then transferred arc, and then moved to height h2 for piercing, with h2 higher than h1. After piercing the torch is moved to the cutting position h1 for cutting, such as set forth in the instant claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent Abstract 1076' in view of Luo et al. Japanese 1076' teaches the claimed subject matter except for showing the use of a fast cut-off for the pilot arc. Luo et al in column 7 lines 41-47 states that the switch to deenergize the pilot arc can be a solid state relay, which is claimed. In view of this teaching it would have been obvious to modify the Japanese system to further cut erosion of the nozzle and electrode by using a semiconductor switch in lieu of the conventional switch, to attain the benefit of faster cut-off and less nozzle erosion.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nishi and Shintani are cited for disclosing patent cutting systems of interest.
